

1

Place your Altegra side wall kit close to your assembled Altegra Gazebo. Unpack the wall kit from the bag.

2

Start in the corner of one leg with the zip lined up in the middle of the leg on the outside. Evenly join the velcro on the wall kit to the canopy valance on the inside. Follow the wall around the entire frame keeping the wall and canopy as tightly sealed as possible.

3

Once you have fully fitted the walls join the 2 sections using the zips and then pull the canopy valance back and tuck the upper zippered section under the canopy valance.

4

Wrap the velcro straps around the legs to secure the wall correctly to the Gazebo frame

5

Ensure the lower elastic straps are hooked in the holes at the bottom of the Gazebo legs.

6

To open the double zipped doors simply unzip both zips

7

Roll up internally using the 3 elastic straps at the top to secure the door flap.

8

If windy we advise to peg the side walls down through the eyelets at the bottom of the walls.

9

The multi walls in the side wall kits can be used as a solid wall if left zipped up or if you wish to have some air flow through the no see-um mesh you can roll the outer flap up and tie the flap up the same as the doors.

Versatile

Optional Extra

3m PVC window that attaches using velcro around the perimeter of the window. This will then allow you to see through without allowing the wind to flow through on colder days.
